Staging Low Risk Prostate Cancer Patients

Phase Treatment, (b) Effective Continuation Phase Treatment of Diabetic Retinopathy: Communication with the Physician for Macular Edema and Level of Severity of Retinopathy. Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitors were prescribed for patients with CAD

Percentage of patients aged 5-50 years of age who were discharged alive for AMI, CABG or PTCA in the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year.

The percentage of patients 18–75 years of age with diabetes (type 1 or type 2) who had BP <140/90 mmHg.

The percentage of patients 18–75 years of age with diabetes (type 1 or type 2) who had a nephropathy study (plain X-ray, MRI, CT scan) within 28 days of diagnosis.

The percentage of patients 18 years of age and older who were identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months.

Percentage of D (Rh) negative, unsensitized patients, regardless of age, who gave birth during a 12-month period and who have been seen for at least two office visits, with blood pressure (BP) recorded.

Percentage of patients, regardless of age, who were born during a 12-month period who were screened for HIV infection during the first or second trimester of pregnancy.

The percentage of patients, regardless of age, who were born during a 12-month period who were screened for HIV infection during the first or second trimester of pregnancy.

Percentage of patients who initiated treatment through an inpatient AOD admission, outpatient visit, intensive outpatient setting or partial hospitalization within 14 days of the diagnosis and who initiated treatment and who had one or more additional sessions with an AOD diagnosis within 30 days of the diagnosis.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

The percentage of patients aged 5 through 40 years with a diagnosis of mild, moderate, or severe persistent asthma who have been seen for at least one test for chlamydia during the measurement year.

The percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months.

Percentage of patients aged 5 through 40 years with a diagnosis of mild, moderate, or severe persistent asthma who have been seen for at least one test for chlamydia during the measurement year.

Percentage of patients aged 5 through 40 years who were identified as active smokers during the measurement year.

Percentage of patients aged 18 years and older who were diagnosed with a new episode of major depression during the measurement year and the year prior to the measurement year, or who had a diagnosis of bipolar disorder during the measurement year and the year prior to the measurement year.

Percentage of patients 18 years of age and older who were discharged alive for AMI, CABG or PTCA in the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year.

Percentage of patients aged 18 years and older who were discharged alive for AMI, CABG or PTCA in the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year.

The percentage of patients aged 18 years and older who were discharged alive for AMI, CABG or PTCA in the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year, or who had a diagnosis of ischemic vascular disease (IVD) during the measurement year and the year prior to the measurement year.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.

Percentage of patients identified as tobacco users within the past 24 months who were queried about tobacco use one or more times within 24 months. The measure calculates a rate for each vaccine and two separate combination rates.
